Hi,

I've had a full review carried out on our new website and the client, surveyor and admin portals:

https://uk-property-surveying.netlify.app/

I want to develop this into a premium, fully operational surveying website and business management platform for NJS Property Group.

The aim is to combine the best functionality of Survey Booker and e.surv, but create something even better, with our own branding, automated booking system, live property information and excellent customer experience.

The design is looking good, but there are several bugs, incomplete functions and improvements that need addressing.

Please use the following as our master development list.

———

🔴 PRIORITY 1 — CRITICAL FIXES

1. NJS Property Group branding

* Replace the generic UK Property Surveying Practice branding with NJS Property Group.
* Incorporate our existing logo and company identity from https://njspropertygroup.com.
* Ensure branding is consistent across the website, client portal, surveyor portal, admin system, emails, reports and invoices.
* Replace generic or fictional surveyor information with approved real details.
* Use our correct RICS registration and company details.

2. Trustpilot integration

* The existing Trustpilot badge incorrectly links to e.surv.
* Replace it with our genuine NJS Property Group Trustpilot profile.
* Display our genuine customer reviews and rating where permitted.
* Ensure clicking the Trustpilot badge opens our actual review profile.

Our Trustpilot page:
https://www.trustpilot.com/review/njspropertygroup.com

3. Contact information

* Remove all demonstration and placeholder telephone numbers.
* Update the website with our approved business telephone numbers.
* Replace generic email addresses with our correct NJS business emails.
* Update business, trading and registered office information accurately.
* Remove all references to pending information, placeholders and internal developer notes.
* Ensure the footer, contact page and all customer communications display consistent details.

4. REMOVE PUBLIC TERMS OF ENGAGEMENT BUTTON — IMPORTANT CHANGE

I do not want a public Terms and Conditions / Terms of Engagement button displayed on the main website.

Please:

* Remove the public Terms of Engagement link from the homepage and footer.
* Remove any general Terms of Engagement button from public service pages.
* Do not display our service-specific survey contracts as a publicly accessible website page.
* Keep the public Privacy Policy and any legally required general website notices available.

How I want the survey Terms of Engagement to work:

* Terms should be available privately once a customer starts a booking or has an instruction created for them.
* If a client books with us over the telephone, by email or outside the website, the admin team must be able to create their booking and send their relevant terms through the client portal.
* The customer receives an email notification that their Terms of Engagement are ready.
* They log in securely, review the correct terms for their survey and digitally sign them.
* The terms must be provided before the customer becomes contractually committed and before the inspection begins.
* Keep a signed PDF copy with the date, time and acceptance record.
* The client should be able to revisit their signed agreement inside their portal.
* Only the client and authorised admin team should access that instruction's agreement.

The Terms of Engagement should be part of the private booking and instruction workflow, not a publicly advertised page.

5. Client login and security

During testing, dashboard routes could be reopened after signing out of the demonstration

session.

Please investigate and fix this.

* Properly invalidate sessions on logout.
* Secure all customer, admin and surveyor routes.
* Ensure clients can only view their own properties and documents.
* Remove public demonstration credentials from the live production system.
* Test registration, password recovery and session expiry.
* Add administrator two-factor authentication.
* Implement secure document storage, permission controls and audit logs.
* Separate demonstration records from real customer data.

6. Fix report and invoice downloads

During testing, clicking PDF download buttons displayed success notifications, but no actual PDFs downloaded.

Please:

* Make all report download buttons fully functional.
* Ensure customers download their correct survey reports.
* Generate downloadable VAT invoices and receipts.
* Allow downloads of signed agreements.
* Store files securely against the correct client and job.
* Display appropriate errors if a file is unavailable.

7. Fix broken website links

Please inspect every button, menu and link.

Specific problems found:

* Privacy Notice links to a missing section.
* Terms of Engagement currently links to the contact page; remove the public link as instructed above.
* Some service-page breadcrumbs link to a missing services section.
* “Which Survey Do I Need?” does not open a proper survey comparison tool.
* “View Status” in client bookings incorrectly opens Terms to Sign.
* Registration legal notices are not properly linked.
* Some breadcrumbs are duplicated.

* Some browser page titles contain repeated branding.

All buttons should perform their advertised functions.

8. Fix inconsistent dashboard information

The demonstration system currently shows conflicting information.

Examples:

* Jobs shown as paid on one page and unpaid on another.
* Different quotation figures appearing for the same instruction.
* Past appointments displayed as upcoming.
* Incorrect “Today” date on the surveyor calendar.
* Inconsistent job statuses and surveyor assignments.

All portals must use one central database, so every update is reflected consistently.

9. Review RICS, legal and professional claims

* Verify all RICS registration information.
* Review the insurance and liability wording.
* Ensure cancellation rights and service terms are correct.
* Remove unsupported claims about accreditations or report turnaround.
* Make sure the wording about surveying independence is accurate given NJS Property Group’s other construction and property services.
* Include the proper complaints procedure and privacy information.

———

🟠 PRIORITY 2 — FULL BOOKING SYSTEM

10. Proper instant quotation engine

Customers should be able to:

1. Enter their property postcode/address.
2. Select the property type.
3. Enter bedrooms, property age and relevant details.
4. Select the required survey.
5. Receive an instant quotation where possible.

6. See the price including VAT, where applicable.
7. Accept the quotation.
8. Receive their private Terms of Engagement.
9. Digitally sign the terms.
10. Make payment.
11. Book their appointment.

Where instant pricing isn’t appropriate, the system should request manual review.

All prices must come from our approved NJS rate cards.

11. Live surveyor availability

* Display genuine available appointments.
* Connect availability with surveyor calendars.
* Allocate surveyors by postcode, qualification and workload.
* Prevent double bookings.
* Allow clients to request rescheduling.
* Send automatic confirmations and reminders.
* Collect estate agent/vendor details and access instructions.

12. Complete customer dashboard

The customer portal should contain:

* Dashboard
* My Quotations
* My Bookings
* Track My Survey
* Appointment Details
* Assigned Surveyor
* Terms to Sign
* Invoices & Payments
* My Reports
* Messages
* Leave a Review
* Support
* My Details
* Previous Surveys

Make it easy to navigate on mobile and desktop.

13. Live survey progress tracker

I want customers to see the stages of their survey:

Enquiry Received → Quote Issued → Quote Accepted → Terms Signed → Payment Confirmed → Appointment Booked → Inspection Completed → Report Preparation → Quality Check → Report Delivered.

Each stage should show the latest update and relevant dates.

Updates made by the admin team should automatically update the client's portal.

14. Surveyor portal improvements

Surveyors should be able to:

* See allocated jobs and appointments.
* Access property and keyholder information.
* View special inspection instructions.
* Log arrival and inspection completion.
* Upload photographs.
* Add inspection notes.
* Upload draft and final reports.
* Submit documents for quality review.
* See report deadlines.
* Manage their availability.

The surveyor portal must work properly on mobile devices.

15. Admin CRM improvements

I want the admin system to manage the entire surveying business.

Features required:

* Lead and enquiry management.
* Customer and property records.
* Quotation generation.
* Follow-up reminders.
* Booking management.

* Surveyor allocation.
* Diary and appointment management.
* Terms and digital signatures.
* Payments and invoices.
* Report quality review.
* Report delivery.
* Customer communications.
* Complaints tracking.
* Revenue reports.
* Conversion statistics.
* Surveyor performance and workload.

The workflow should be similar to Survey Booker, with all information connected.

16. Payments and invoices

* Integrate an approved payment provider such as Stripe.
* Support our required deposit or full-payment options.
* Generate accurate invoices and receipts.
* Record payment success or failure.
* Update the relevant job automatically.
* Allow the admin team to record approved offline payments.
* Support cancellation and refund processes.

17. Automated emails and notifications

Set up automated notifications for:

* New enquiry received.
* Quote issued.
* Quote accepted.
* Terms ready for signature.
* Terms signed.
* Payment received.
* Appointment confirmed.
* Appointment reminder.
* Survey completed.
* Report being prepared.
* Report available.
* New customer message.
* Admin response.

* Review invitation.

All emails should have NJS branding.

———

🟠 PRIORITY 3 — CLIENT MESSAGING & GMAIL INTEGRATION

18. FULL CLIENT-TO-ADMIN MESSAGING SYSTEM — HIGH PRIORITY

I want a proper messaging service inside the customer portal.

Customer features:

* A dedicated “Messages” section.
* Customers can message the NJS admin team directly.
* Conversations linked to the customer’s property or survey job.
* A complete message history.
* Unread-message notifications.
* Ability to receive admin responses.
* Ability to attach relevant documents or photographs.
* Clear dates and times on messages.

Admin features:

* Central customer messaging inbox.
* View all incoming messages.
* Filter unread messages.
* Reply directly to customers.
* View the relevant customer and survey information.
* Assign conversations to admin staff.
* Maintain a complete conversation history.
* Track unanswered enquiries.

19. Connect messaging to our business Gmail

This is extremely important.

I want the messaging system connected to our designated NJS business Gmail account.

When a customer sends a message:

1. The message appears in the admin dashboard.
2. Our business Gmail receives an automatic notification.
3. The notification identifies the customer and relevant job.
4. The email includes a secure link to the conversation.
5. The admin team can open and respond to the message.
6. The client receives an email notification when we reply.

Ideally, Gmail replies should synchronise with the correct portal conversation as well, if technically feasible.

I want one central message history so nothing gets lost.

Please use a secure Gmail integration and do not store account passwords in the website frontend.

20. Messaging automation

Please also include:

* Automatic acknowledgement of client messages.
* Out-of-hours responses.
* Notifications for unread messages.
* Reminders for messages awaiting an admin response.
* Message history linked to each survey job.
* Secure handling of attachments.
* Proper access restrictions and data protection.

The messaging system must be genuinely functional, not just a form that displays a success message.

———

🟡 PRIORITY 4 — WEBSITE EXPERIENCE

21. Improve homepage design and content

* Retain the premium look of the current design.
* Make the NJS brand much more prominent.
* Add genuine team and surveyor photographs.
* Display verified professional credentials.

* Include genuine Trustpilot reviews.
* Make instant quotations a main homepage feature.
* Explain the survey process clearly.
* Add sample reports.
* Improve calls to action.
* Reduce repetitive and overly technical text.
* Clearly explain why clients should choose NJS.

22. “Which Survey Do I Need?” tool

Create an interactive questionnaire.

Ask customers about:

* Property age.
* Property type.
* Approximate condition.
* Previous alterations.
* Whether the property is a new build.
* Any particular concerns.

Recommend the appropriate survey with a clear explanation.

Allow the customer to proceed directly to a quotation.

23. Sample survey reports

Add:

* Sample Level 2 report.
* Sample Level 3 report.
* Example condition ratings.
* Explanation of common defects.
* Guide to reading a survey report.

Use properly anonymised sample reports.

24. Mobile optimisation

* Ensure the whole website works properly on mobile and tablet.
* Make the quotation process quick and straightforward.

* Test payments and digital signatures.
* Test portal messaging.
* Test report downloads.
* Improve loading speeds.
* Check accessibility and navigation.

25. SEO improvements

* Optimise surveying service pages.
* Target London, Surrey, Oxfordshire, Buckinghamshire and Berkshire.
* Improve page titles and descriptions.
* Add appropriate location pages.
* Fix broken links and redirects.
* Add sitemap and structured data.
* Preserve our existing search visibility.
* Track enquiries, quotes and bookings through analytics.

———

🔵 PRIORITY 5 — NEW FEATURES TO MAKE NJS STAND OUT

26. NJS Property Intelligence

I would like a new property information feature.

Customers enter a postcode or property address and receive useful information such as:

* Recent property sale prices.
* Local house-price trends.
* Available EPC information.
* Conservation-area details.
* Relevant environmental and flood information.
* Suggested survey options.

Potential data sources include HM Land Registry, ONS, government EPC data, Planning Data and the Environment Agency.

Information must be accurate, properly sourced and clearly dated. It must not be presented as a replacement for a professional survey.

27. NJS Property Pulse — Live Property News

Add a professional property news section featuring:

* UK property-market news.
* House-price updates.
* Mortgage-market developments.
* RICS news.
* Building regulation changes.
* Energy-efficiency updates.
* Property-buying advice.
* Local housing-market information.

Ideally, this should update from approved data/news sources and include original NJS commentary.

28. Property buyer resources

Create useful tools and guides:

* Homebuyer checklist.
* Level 2 vs Level 3 comparison.
* Common property defects.
* Damp and condensation guide.
* Property maintenance advice.
* Survey preparation checklist.
* Understanding RICS condition ratings.
* What to do after receiving your survey report.

29. Estate agent and referral partner portal

Consider a separate portal for estate agents, brokers and referral partners.

They should be able to:

* Submit new survey referrals.
* Track permitted referral progress.
* See relevant booking updates.
* Manage their referral history.

Access must be secure and restricted to appropriate information.

30. Additional customer features

* WhatsApp contact integration.
* Appointment reminders.
* Request a call from your surveyor.
* Easy report access.
* Secure document uploads.
* Customer feedback.
* Simple support requests.
* Automated follow-ups.

———

🟢 PRIORITY 6 — TRUSTPILOT REVIEW SYSTEM

31. Add a Trustpilot review button inside the client portal

I want a clearly visible “Leave Us a Review” button.

Requirements:

* Link directly to the NJS Property Group Trustpilot review page or approved Trustpilot invitation link.
* Display the button in the client’s dashboard.
* Display a review option after the customer’s survey report has been delivered.
* Automatically email a genuine review invitation after completion.
* Make the review process easy on mobile.
* Track review invitations sent and avoid excessive reminders.
* Ensure the review link never directs customers to another company.

Our Trustpilot profile:
https://www.trustpilot.com/review/njspropertygroup.com

———

✅ FINAL SYSTEM TESTING

Before the website goes live, I want the entire customer journey tested:

Customer Enquiry → Quote → Acceptance → Private Terms Issued → Digital Signature → Payment → Surveyor Allocation → Booking → Inspection → Report Upload → Quality Approval →

Report Download → Invoice → Review Invitation.

Also test the full messaging journey:

Customer Sends Message → Admin Dashboard Receives Message → Business Gmail Receives Notification → Admin Replies → Customer Receives Reply and Email Notification.

Everything must work correctly across the customer, surveyor and admin systems.

Please test:

* Every website link.
* Every form.
* Every download.
* Customer registration and login.
* Password recovery.
* Account permissions.
* Payment processing.
* Email notifications.
* Gmail integration.
* Messaging.
* Digital signatures.
* Surveyor allocation.
* Report delivery.
* Mobile responsiveness.
* Data consistency.
* Security.

I don’t want buttons that only display notifications without performing the actual action.

———

WHAT I NEED BACK FROM YOU

Please go through all 31 points and confirm:

1. What is already fully operational?
2. What is currently only a demonstration?
3. Which problems can be fixed immediately?
4. Which features need new development?
5. Estimated completion dates for each priority.

6. Any additional API subscriptions or third-party costs.
7. Your recommended order of development.

My ultimate goal is to make NJS Property Group one of the most modern and professional independent surveying businesses online.

I want a system that looks excellent, makes booking surveys incredibly easy for customers, gives our team complete operational control and offers useful features that other surveying companies don't have.

Let's get all the existing functions working properly first, then develop the additional features that will make NJS stand out.

Thanks!
